

Class 05 — Homework

Bong Study Hub — Foundation Batch 2026 · Class 05: Your First Python Program

From English Instructions → Python Code

Estimated time: 30–45 minutes **Total:** 30 marks · **Optional Challenge:** up to 3 bonus marks **Tools needed:** pen and paper, or a simple document. A computer with Python is helpful for checking your work, but not required to answer any question. **Prerequisite:** Class 05. No variables, `input()`, loops, or conditionals are needed anywhere in this assignment.

What This Assignment Is About

In class, we asked how to tell a computer something in a way it can actually follow — since a computer never fills in a gap the way a person listening to you would. We wrote and ran real Python code: `print()` to display text, quotes to mark where text starts and ends, comments that Python ignores completely, and instructions that always run top to bottom, in order.

This assignment asks you to **read and reason about code, not just recall facts about it**. Several questions give you a snippet of Python and ask what it does, or what's wrong with it — exactly like the write-run-read-fix loop from class, just on paper.

Instructions

- **Answer in your own words** where a question asks for an explanation.
- For "predict the output" questions, write the **exact** text Python would display, line by line.
- **No variables, `input()`, conditionals, or loops appear anywhere in this homework** — if your answer to any question involves one of those, you've gone further than this assignment asks; simplify it back down to `print()`, quotes, and comments.
- You may refer to your **Student Notes** while answering.
- If you're unsure, **explain your reasoning anyway** rather than leaving a blank — partial thinking is worth more than an empty space.

Section A — Core Concepts

Question 1 — Why Precise Instructions? (2 marks)

In your own words, explain **why a computer needs precise, unambiguous instructions rather than plain English**.

Question 2 — What Does print() Do? (2 marks)

In your own words, **explain what `print(...)` does** when a program runs.

Question 3 — Why Quotes? (2 marks)

Explain why the text inside `print()` needs to be wrapped in quotes.

Question 4 — What Is a Comment? (2 marks)

Explain what a comment (`#`) does in a Python program, and who comments are actually for.

Question 5 — Meet Python (2 marks)

In one or two sentences, **explain what Python is**, and **is it the only programming language that exists?**

Section B — Reading and Reasoning About Code

Question 6 — Predict the Output (3 marks)

```
print("Roll call!")  
print("Name: Aritra")  
print("Class: Foundation Batch")
```

Write the exact output, line by line, in the order it would appear.

Question 7 — Find the Bug (3 marks)

```
print("The sky is blue.)
```

What's wrong with this line? Rewrite it correctly.

Question 8 — Find the Bug, Again (3 marks)

```
PRINT("Good morning!")
```

What's wrong with this line? Rewrite it correctly, and explain why

Python treats `PRINT` differently from `print`.

Question 9 — Order Matters (3 marks)

```
print("Step 1: Wake up")
print("Step 2: Brush teeth")
print("Step 3: Eat breakfast")
```

Suppose **line 1 and line 3 are swapped**, so the program now reads "Step 3" first and "Step 1" last. **Write the new output, in the exact order it would now appear**, and explain in one sentence *why* the order changed.

Question 10 — Comments Don't Run (3 marks)

```
# This line explains the program
print("Welcome!") # greets the user
# print("This line is commented out")
```

Write the exact output this program produces. (Careful — read every line closely.)

Section C — Class Connection & Your Own Program

Question 11 — Connecting Class 01 and Class 05 (2 marks)

Fill in the two blanks below, using ideas from today's class:

```
PROBLEM
↓
LOGIC
↓
ALGORITHM
↓
_____
↓
_____
↓
OUTPUT / RESULT
```

Briefly explain, in one sentence, what Class 05 added to Class 01's chain.

Question 12 — Write Your Own Program (3 marks)

Write a short program (on paper is fine) about a topic of your choice — your favorite hobby, a place you like, anything you want. It must have:

- At least **three** `print()` lines.
- At least **one** comment.

Then, in one or two sentences, **explain why getting an error while writing it would be a normal part of the process, not a sign you did something badly wrong.**

Optional Challenge — Bonus (up to 3 marks)

This section is entirely optional and will not affect your base grade.

The program below has **three separate bugs**. Find all three, and rewrite the corrected program in full.

```
# prints a short introduction
print("Hi, I'm learning Python!")
Print("This is my second line.")
print("This is my third line.")
# print("This line won't show up – why?"
```

Submission Format

Choose whichever is easiest for you:

- **Option A:** Handwrite your answers, then photograph or scan them.
- **Option B:** Type your answers in a simple document.
- **Option C:** Submit as a simple PDF.

Please label each answer with its question number.

Before You Submit — Self-Check

- ☐ I answered all 12 questions.
- ☐ For every "predict the output" question, I wrote the exact text, in the exact order.
- ☐ Where unsure, I explained my reasoning instead of leaving a blank.
- ☐ I did not use variables, `input()`, conditionals, or loops anywhere.
- ☐ I reviewed my work before submitting.
